

Employee Attrition and Workforce Analytics

A decision-ready view of workforce distribution, attrition risk, salary patterns, and experience mix.

EXECUTIVE SIGNAL

264 employees left — a 26.4% attrition rate.

Workforce health at a glance

The dashboard combines four KPIs with the five analyses required by the project brief.

QUESTION 1

Sales has the highest workforce

Department headcount is reasonably balanced, but Sales accounts for more than one quarter of all employees.

Direct answer

Sales is the largest department with 272 employees. Finance is the smallest with 235, so the spread is only 37 employees.

Planning implication

Capacity is broadly distributed; workforce decisions should focus on attrition risk and role coverage, not only department size.

Attrition is 26.4%, with a higher male rate

Counts and rates tell different parts of the story; both point to a stronger retention concern among male employees.

Male attrition

148 left out of 511 employees (29.0%).

Female attrition

116 left out of 489 employees (23.7%).

QUESTION 4

Average salary differs modestly by department

Sales leads, while HR is lowest; the maximum gap is \$4,051, or about 7.2% of HR's average salary.

● Highest average

Sales: \$60,575, only \$428 above Finance.

● Review point

HR averages \$56,524. Check whether role mix, seniority, or pay positioning explains the gap before treating it as inequity.

QUESTION 5

The workforce is concentrated in the 16+ years group

Experience bands were defined for analysis: 0–2, 3–5, 6–10, 11–15, and 16+ years.

Succession priority

40.2% of employees have 16+ years of experience. Preserve institutional knowledge and identify critical-role successors.

Retention priority

The 6–10 year group has the highest attrition rate among the bands: 31.8% (55 of 173).

Next analysis

Segment attrition by job role, department, age, and salary together to locate actionable pockets of risk.
